

# **Validation of Satellite Image with Ground Sensor Network based on OGC Web Services Framework**

**Sarawut NINSAWAT**

**Ryousuke Nakamura, Hirokazu Yamamoto,  
Akihide Kamei and Satoshi Tsuchida**

**GEO Grid Research Group/ITRI/AIST**

# Introduction

- The utilization of satellite remote sensing image
  - Widely applied and been recognized as powerful and effective tool
  - Monitoring state of the environments
- Benefit of satellite RS:
  - Cheap and rapid over large geographic area
  - Regional coverage and broadly spectral resolution
  - Continuous acquisition of data
  - Archive of historical data
- Limitation of satellite RS:
  - Not direct sample of the phenomenon.
  - Interference of atmospheric gaseous and particles
    - Absorbing ( $H_2O$ ,  $O_3$  etc.) and Scattering ( aerosol particles such as dust, ash and smoke)

# Surface reflectance and Top of the atmosphere

# Atmospheric Correction

- Convert the “top of the atmosphere” signal to the “surface reflectance”.
  - Estimating the surface spectral reflectance as it would have been measured at ground level
  - Radioactive transfer model
- **6S = Second Simulation of the Satellite Signal in the Solar Spectrum**
  - Work in cloud free condition
- Necessary Input parameters:
  - Geometrical condition
  - Atmospheric model for gaseous components
  - **Aerosol mode** (Type and concentration)
  - Spectral condition
  - Ground reflectance (type and spectral variation)

# MODIS (MODerate-resolution Imaging Spectroradiometer)

- Capable of viewing the entire globe daily at moderate resolutions
  - Ranging from 250 meters to 1 kilometer pixels.
  - 36 spectral bands ranging in wavelength from 0.4  $\mu\text{m}$  to 14.4  $\mu\text{m}$
  - Land, Cloud, [Aerosol properties](#), Atmosphere, Ocean color etc.
- Various products generated for earth observation purpose
  - Vegetation indices, leaf area index, sea surface temperature.
- 6S is a basic code for MODIS atmospheric correction algorithm.
  - Gaseous condition - > MOD05 and MOD07
  - Cloud mask -> MOD35
  - Aerosol concentration -> MOD04

# MOD04 and MOD08

- The **algorithm** retrieves daily Aerosol Optical Depth (AOD) as known as MOD04 in Level two product
  - Using seven bands of MODIS.
  - Resolution at 1 x 1, 5 x 5 and 10 x 10 km.
- The MOD08 is a Level three product as global dataset from MOD04
  - Daily Global, Eight-day Global and Monthly Global ( Resolution 1° x 1° )
- Validation with ground observation is necessary to improve uncertainly estimate.

Band	Wavelength (μm)	Resolution (m)	Primary Use
1	0.620-0.670	250	Land/Cloud/Aerosols Boundaries
2	0.841-0.876	250	
3	0.459-0.479	500	
4	0.545-0.565	500	Land/Cloud/Aerosols Properties
5	1.230-1.250	500	
6	1.628-1.652	500	
7	2.105-2.155	500	

- Phenological Eyes Network
  - Monitoring dynamics of the ecosystem
  - Validate satellite information with **reliable information** on **ground level**
- Measurement equipments:
  - Sunphoto meter (SP)
    - 11 spectral bands with FOV 1 degree at 10 minutes interval
    - **Optical thickness**, aerosol size and aerosol reflective index etc.
    - Main purpose for atmospheric correction and monitoring pollutants
  - Automatic-capturing Digital Fisheye Camera (ADFC)
    - High quality **images of the sky**, canopy, branch and ground
    - 2 – 180 minutes interval
    - Sky condition at satellite overpass time.
  - Hemi-Spherical Spectral Radiometer (HSSR)

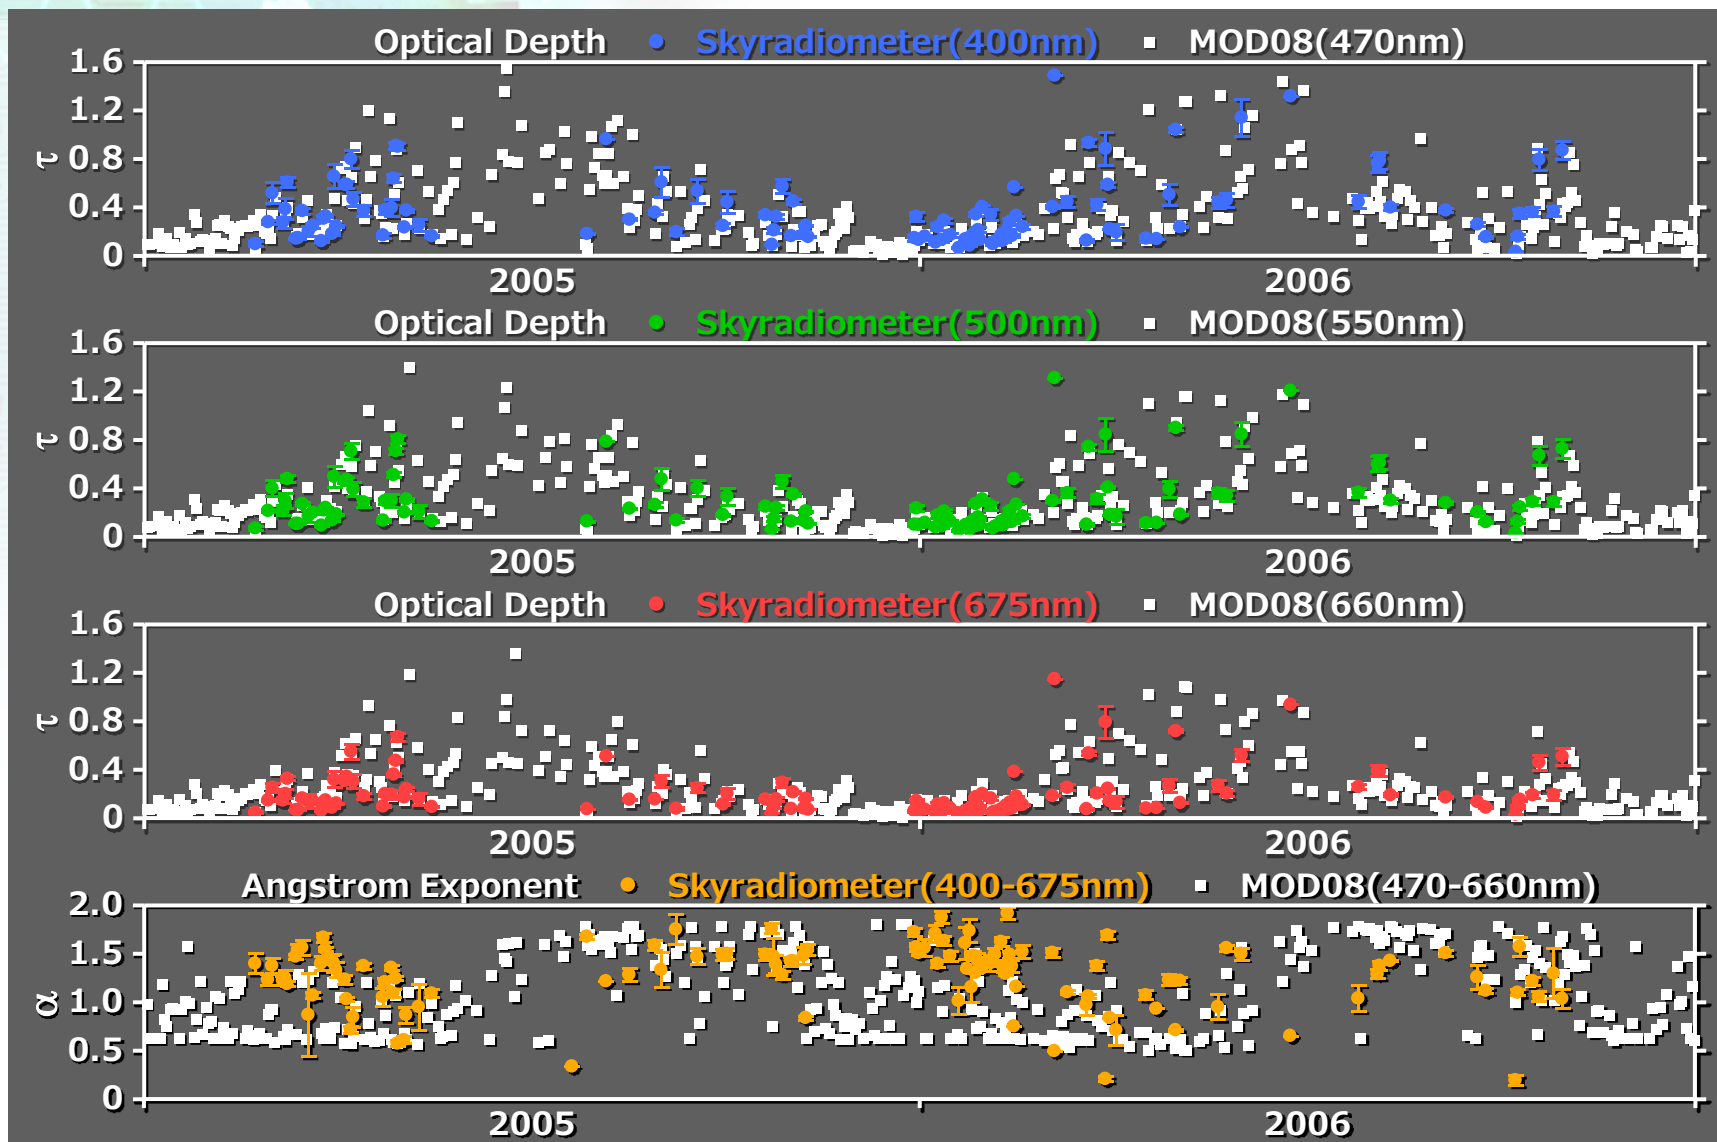

# PEN Equipments

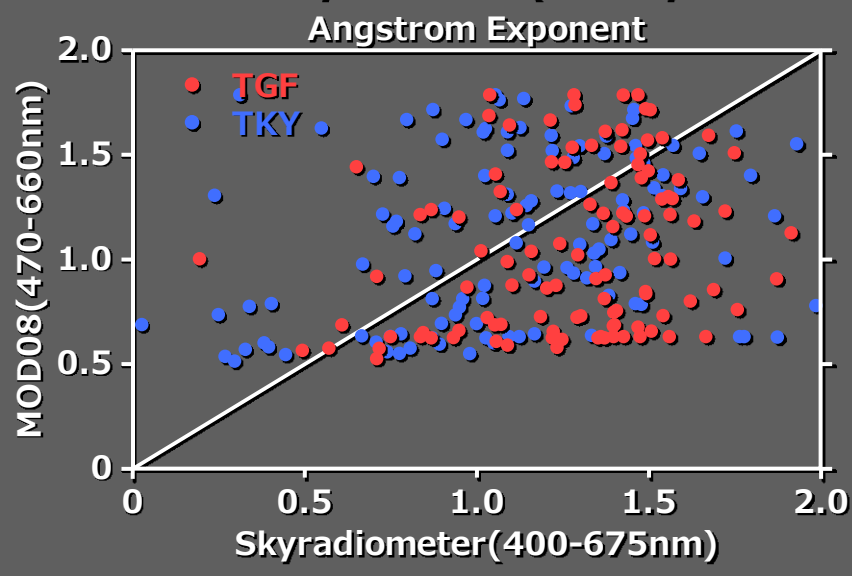

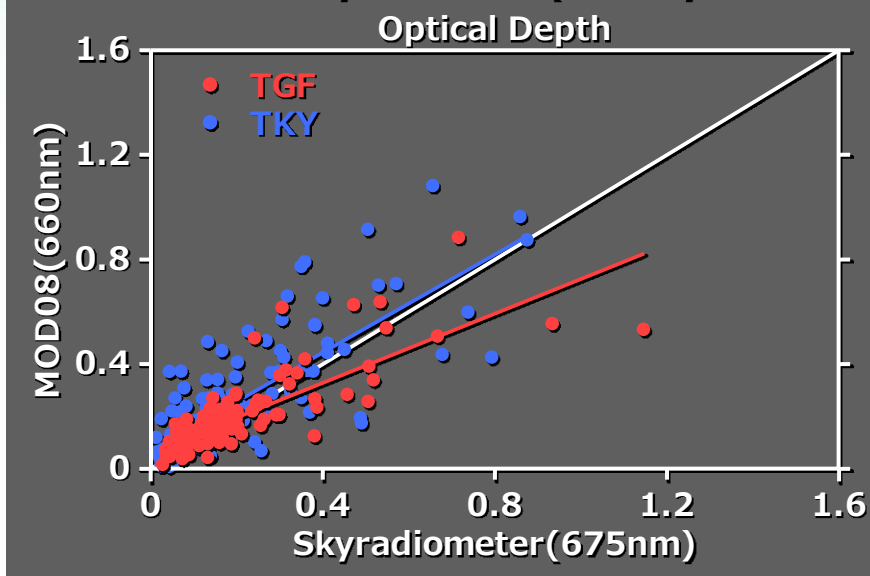

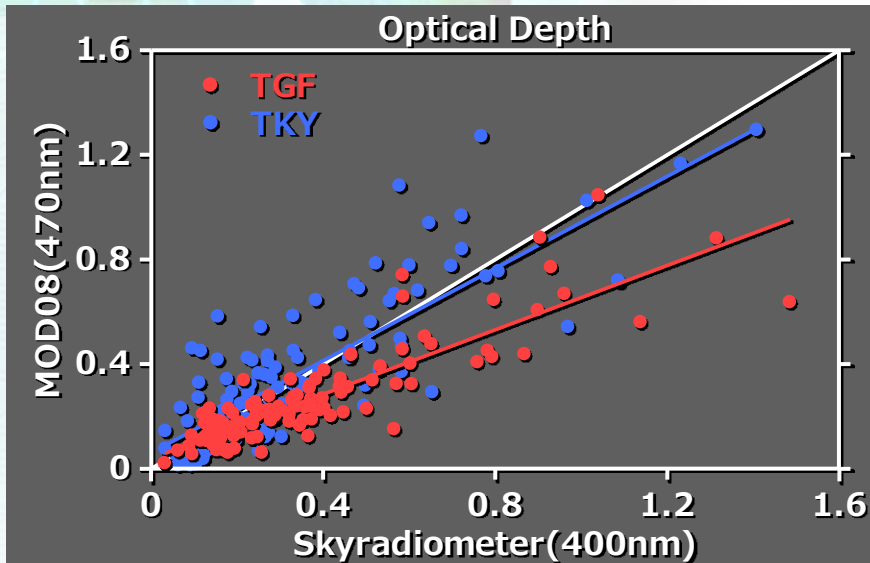

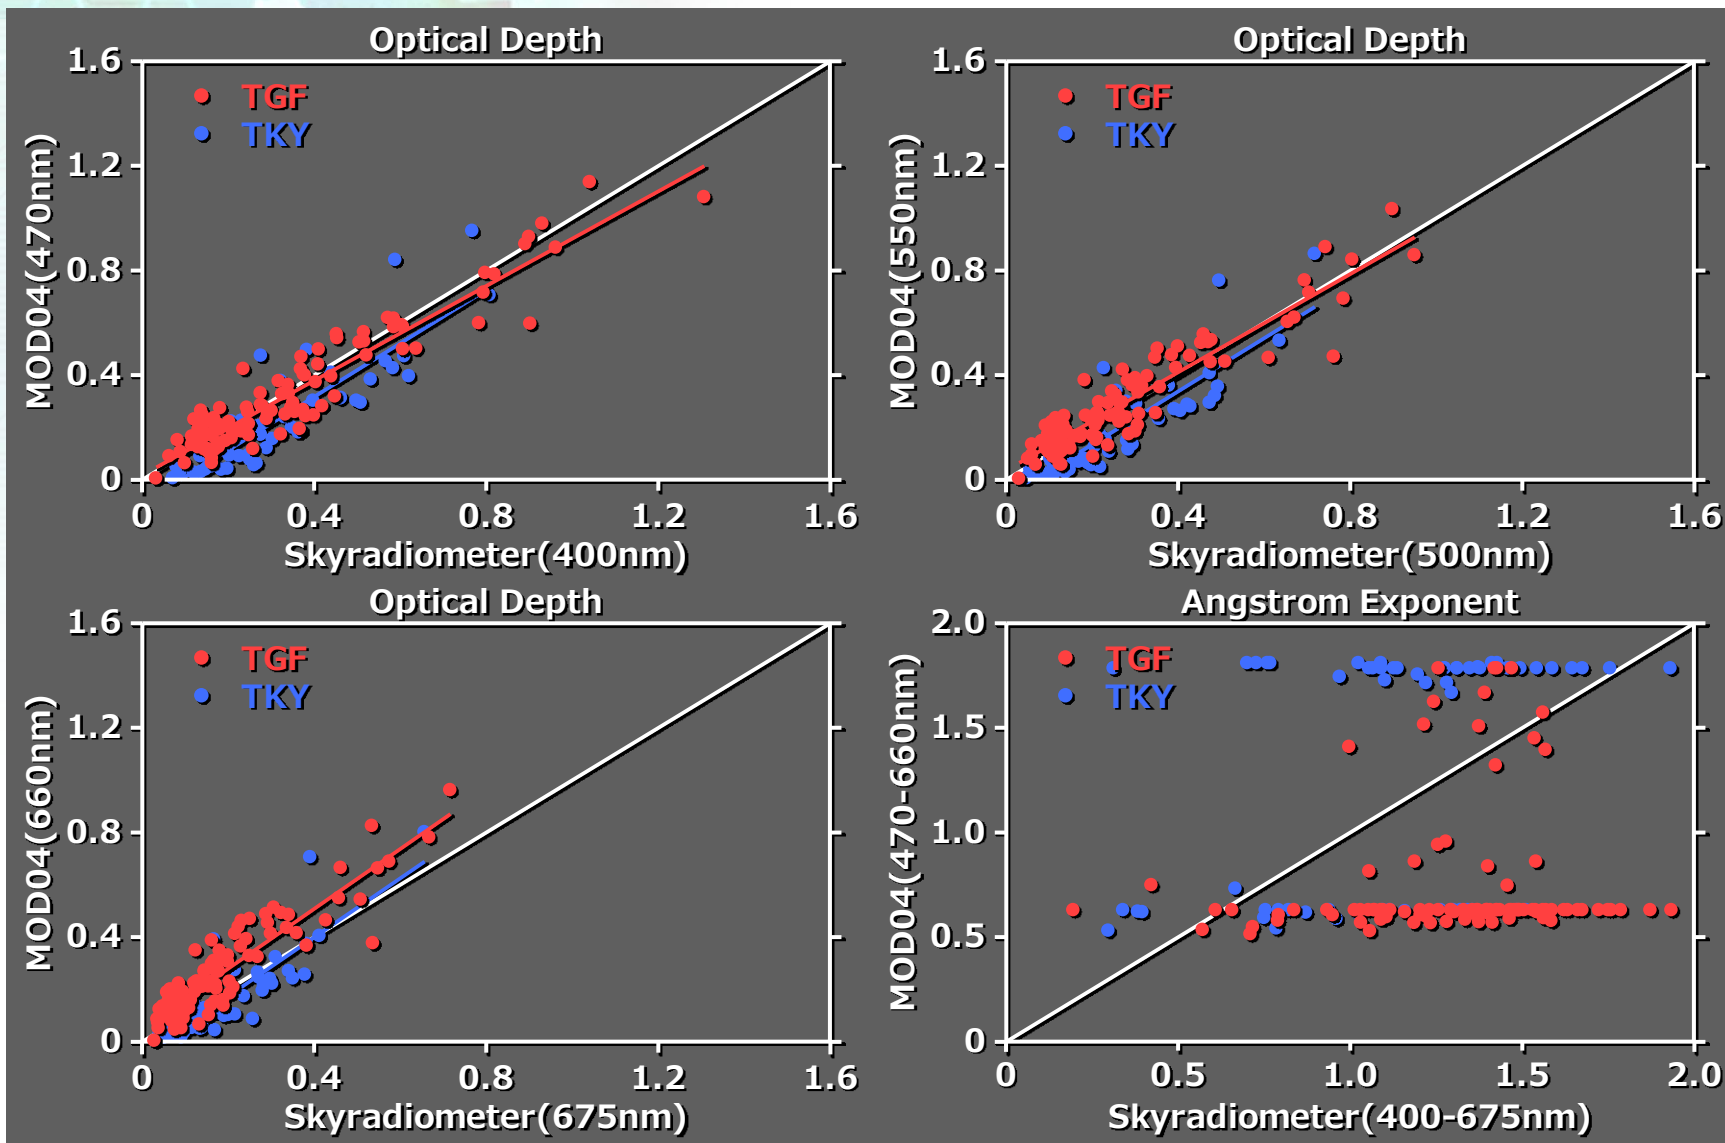

# Validation (SP & MOD08)

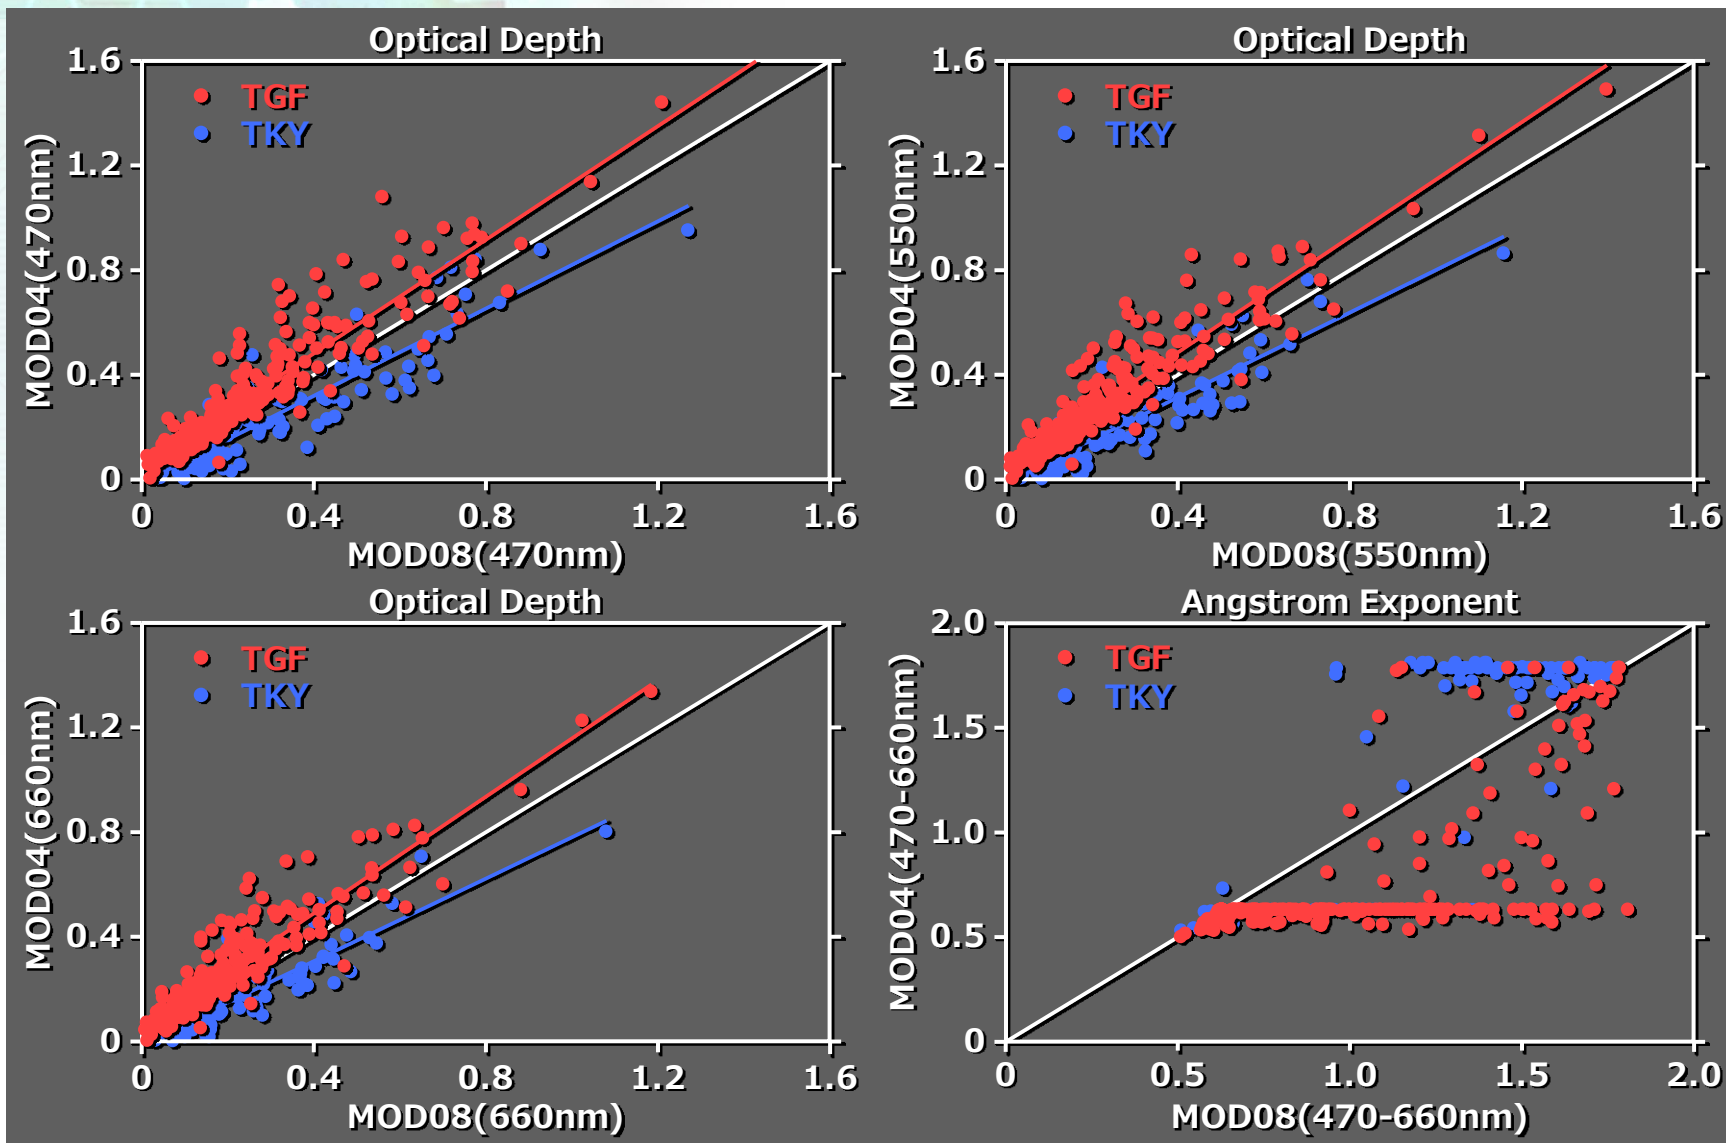

# Validation (SP & MOD08)

# Validation (SP & MOD04)

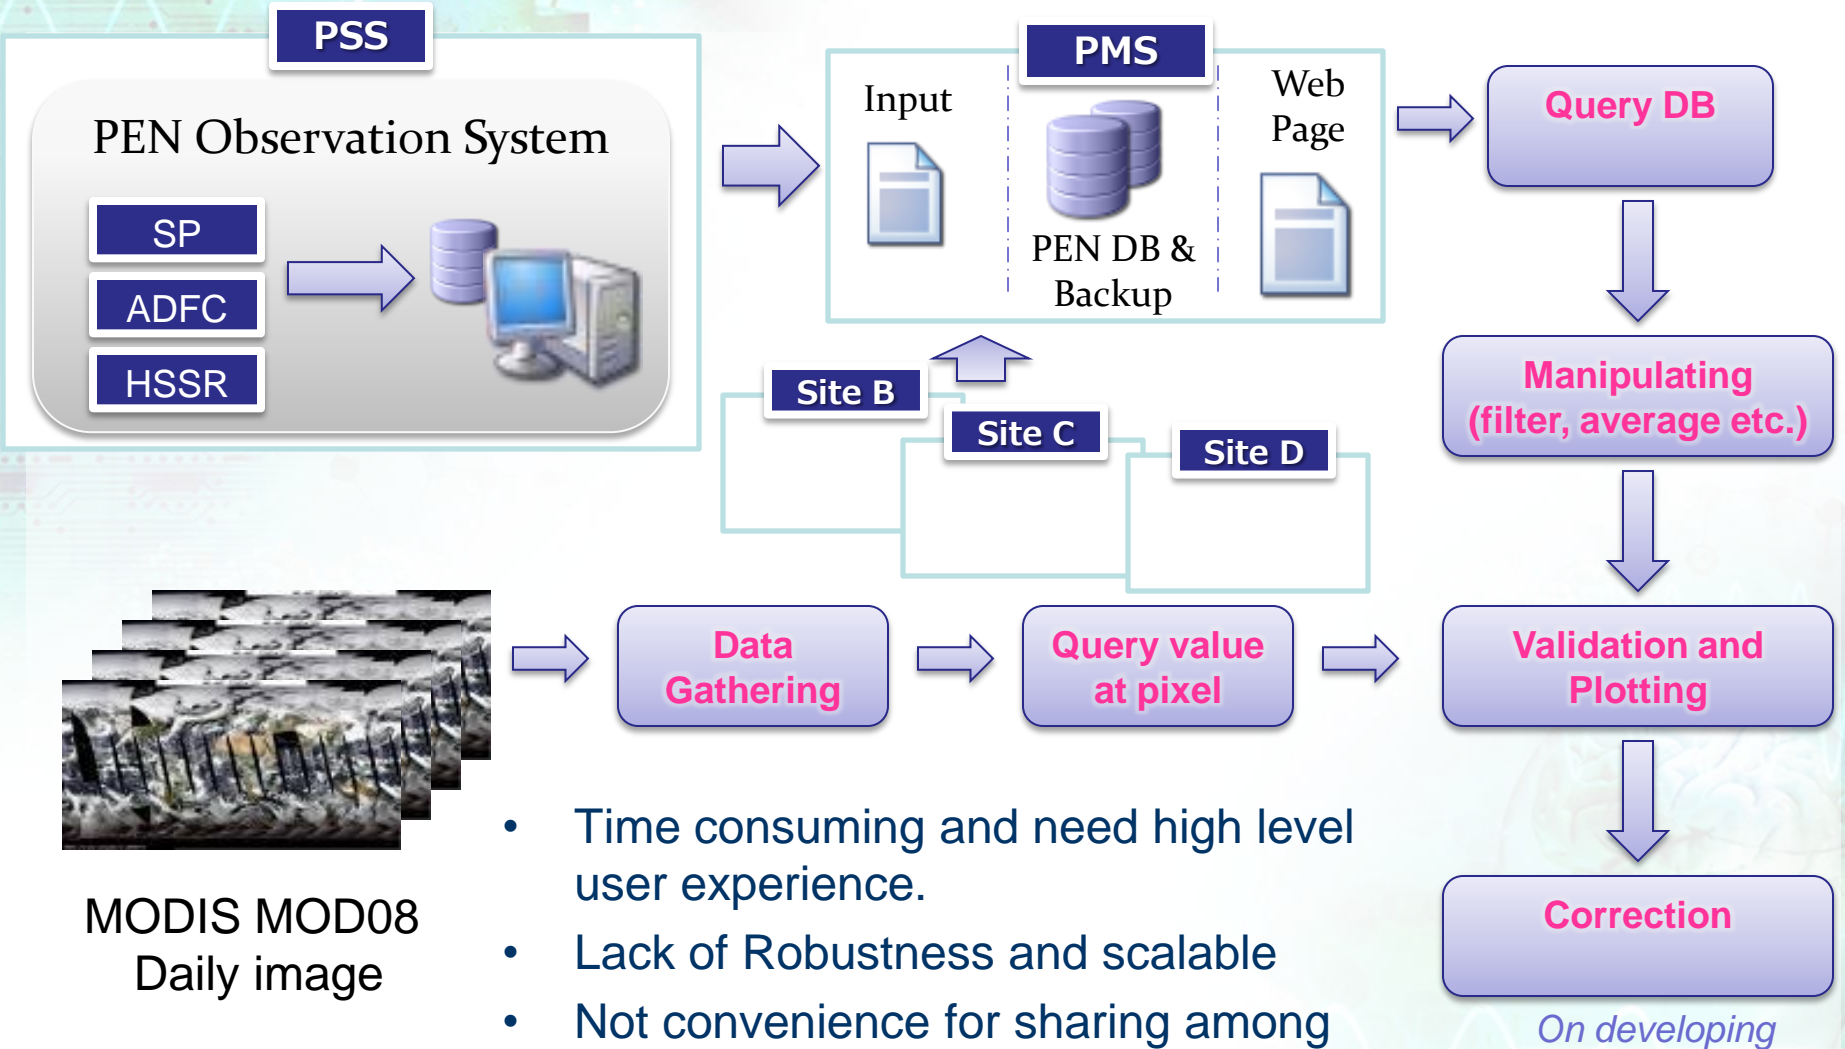

# Validation (MOD08 & MOD04)

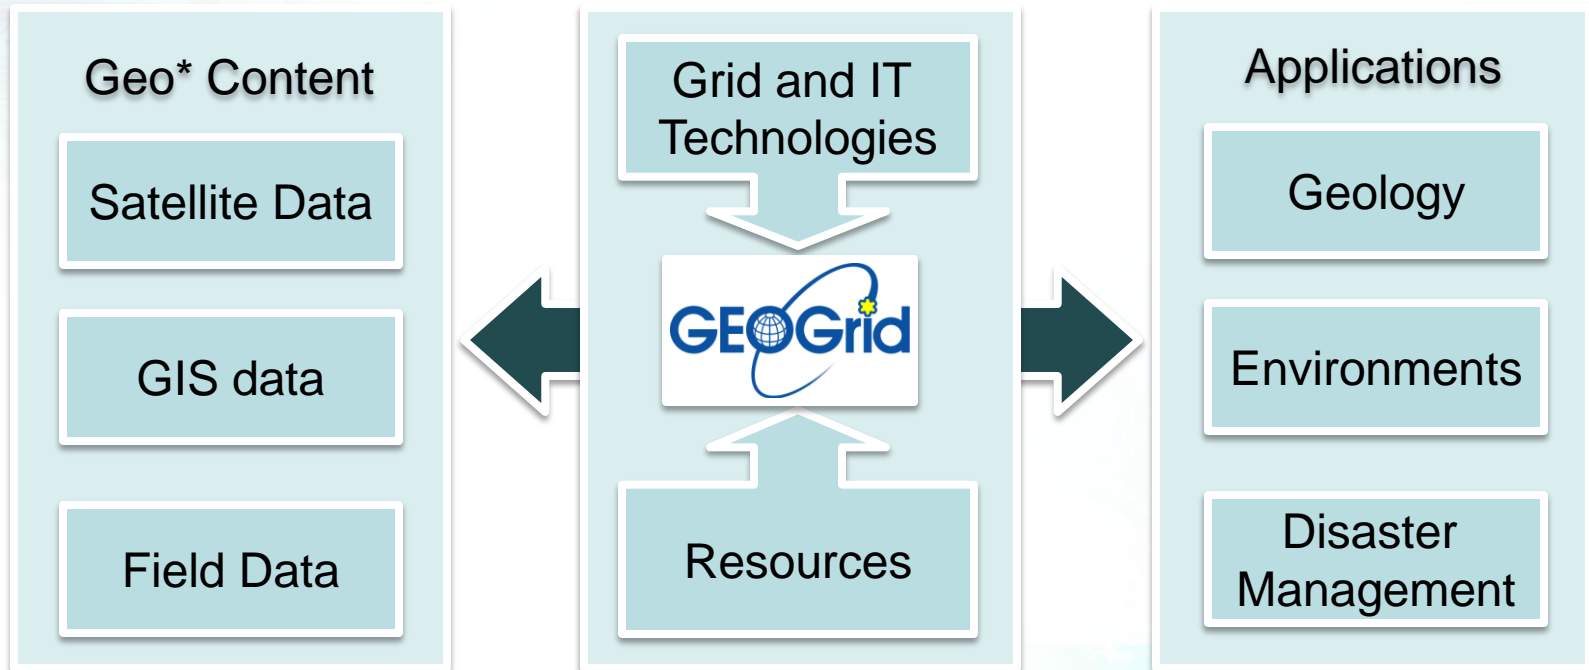

# Previous System Framework

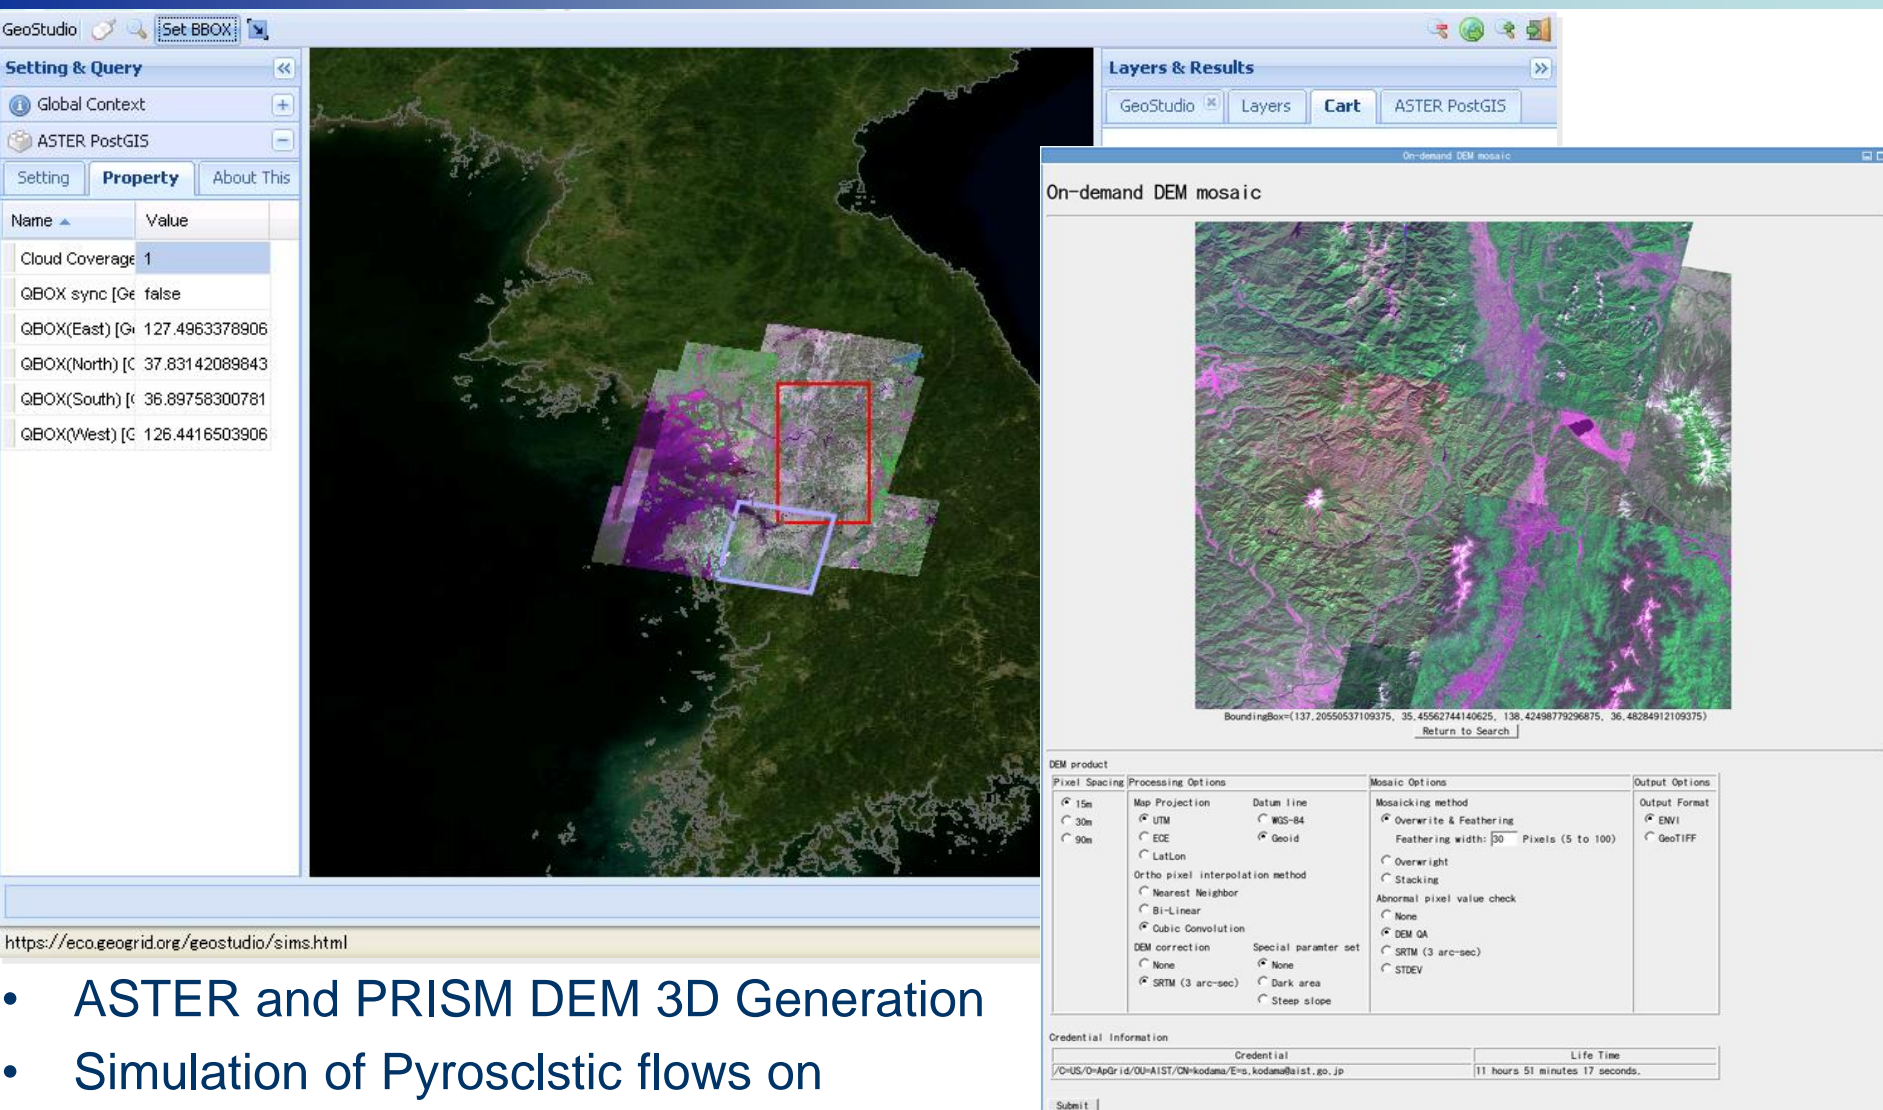

- Time consuming and need high level user experience.
- Lack of Robustness and scalable
- Not convenience for sharing among communities

# Geo Grid

- GEO (Global Earth Observation) GRID
  - An E-Infrastructure to accelerate GEO science based on the concept that whole data related to earth observation are **virtually integrated** with a **certain access management** and **easy to handle** by the end-users those are enabled by a set of Grid and Web Service technologies.

# ASTER DEM on demand mosaic system

- ASTER and PRISM DEM 3D Generation
- Simulation of Pyrosclastic flows on volcano

# OGC System Framework

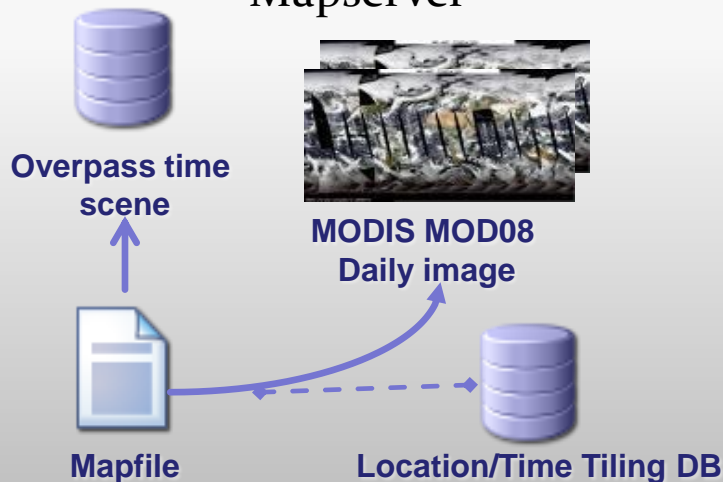

# WMS Time Tiling

- WMS-T support for time request
  - Time instance (etc. 2002-01-01)
  - Time period (etc 2002-01-01/2002-10-01)
- Currently, Mapserver do not support for WMS Time Tiling for “GetFeatureInfo” request with raster layer
  - “errors that look like this msShapefileOpen(): Unable to access file. (f:/msapps/gmap-ms40/htdocs/my\_layer\_idx ” **Ticket #2796**
  - Solution : WxS mapscript

## WMS-T

## Time Series Chart

From : 2005/01/01 To : 2006/01/01, [AOD400] of TGF

# Chart Zooming

# Conclusion

- Comprehensive web-based GIS system framework enabled
  - Based on various open standards of OGC specifications
  - Using FOSS
    - Mapserver, 52North SOS, PyWPS
    - OpenLayers, jQuery,
- Assimilation of sensor observation data and satellite image
  - Wider area, More accuracy, Reasonable cost
- Validation of aerosol properties from Satellite estimation with ground based sites
  - Improve the following product which relied on satellite image “surface reflectance”

# Future Development

- Increase atmospheric observation network
  - Skynet
- Improving performance
  - Distributing ground site data source
    - More than two million records for two station and four years
  - WMS-T full supported with Mapserver
  - MOD03 overpass time to MOD08 Global dataset
    - Possible to error 5 minutes observation
- Satellite image **product** validation
  - GLEON (Global *Lake* Ecological Observatory Network)
    - Lake monitoring : SST, Chl. A : MODIS Ocean product
  - CO Flux monitoring : Asiaflux / Japanflux
- Water Column Correction
  - CREON (Coral Reef Environmental Observatory Network)
- Validation with higher satellite image resolution
  - ASTER, FORMOSAT-2
